# ap
apis point

The setup process enables you to provision and configure your SO+ER device and wireless network settings. To complete the setup, you must have a SO+ER Cloud account.

step 1

- Create a SO+ER Cloud account at **https://soter.apispoint.com**
- Plug-in SO+ER to power on
- Connect to the SO+ER Wi-Fi network

  Network security: *WPA2*
  Network name (SSID): *AP-Soter-#####*
 Network password: *AP-Soter*

---

step 2

- Open a modern web browser
- Go to the following URL: *192.168.8.1*
- Click the **CALIBRATE** tab
- Click the **CALIBRATE** button

  Rotate the device in all directions for ~45 seconds

---

step 3

- Click the **PROVISION** tab
- Select the host Wi-Fi Network Security protocol
- Type in the host Wi-Fi Network Name (SSID)
- Type in the host Wi-Fi Network Password
- Click the **SAVE** button

  SO+ER is compatible with 2.4 GHz Wi-Fi networks
  Use a computer to configure the host Wi-Fi network
  Turn mobile hotspots off and on before connecting to them

---

step 4

- Type in a SO+ER Cloud Email address
- Type in the Password
- Click the **SIGN IN** button

  The device will automatically provision itself to the cloud account

  Use SO+ER Cloud at **https://soter.apispoint.com** to view and classify event detections, or manage device settings

---
